

PRESS RELEASE

FRx Financial Reporting Now Available for Ross Systems

FRx announces partnership with Ross Systems

DENVER, September 8, 1997 -- FRx Software Corp. announced today that it has formed a partnership with ERP client/server software provider Ross Systems. Through this alliance, FRx Workgroup Edition financial reporting software is now available with the Ross General Ledger system, a component of the Ross Systems Renaissance C3 product suite.

"Ross Systems selected FRx Software to be its partner because it provides an advanced report writer that complements and extends our standard report writer," said Gary Leiffer, product manager of financial product marketing for Ross Systems. "FRx has worked with Ross Systems to create a unique interface allowing all Ross CS General Ledger postings to be available instantly and reflected real-time when an FRx report is generated."

"Teaming up with FRx provides our customers with advanced financial reporting technology and greatly enhances our CS Financial Products offering," continued Leiffer.

Paul Rajski, president and CEO of FRx said, "We welcome Ross Systems to FRx's growing group of select business partners. This affiliation propels us further toward our goal of providing financial reporting intelligence for the world's leading general ledger systems. FRx's newly-released foreign language versions in French, Spanish and German are well suited to Ross' strong international presence."

FRx Software and Ross CS General Ledger

Drawing data directly from the Ross CS General Ledger System, FRx creates presentation-quality, custom financial reports with powerful reporting tree hierarchies. Because FRx is Windows-based, the reports have a strong visual appeal through the utilization of multiple fonts, colors and formatting options.

Once the reports are created, they can be sent electronically to designated managers. This means that a company's financial reporting is available across the hall or around the world immediately. Costly delays are eliminated. When the reports are delivered, the recipient opens the file and, with a standalone FRx DrillDown Viewer, can examine account and transaction detail by clicking on report entries.

Ross Systems Inc.

Ross Systems Inc. develops, markets and supports a broad range of client/server business solutions, including financials, manufacturing, maintenance, distribution, transportation management, materials management and human resources applications as well as comprehensive application development products for the manufacturing, healthcare and public sector markets. Ross Systems products are available for the following open systems environments: Hewlett-Packard's HP-UX, IBM's RS/6000, Digital's Alpha architecture, Fujitsu DS-90 UNIX, Siemens Nixdorf, OpenVMS, Digital UNIX, and Microsoft Windows NT support for the Intel and Alpha chips. More than 2,800 companies around the world use business solutions from Ross Systems to run

their operations.

FRx Software Corp.

FRx develops and markets advanced visual financial reporting software that interfaces with major accounting and ERP systems. The Workgroup and Enterprise Editions include an advanced 32-bit application server for high-speed production of financial reports. Multi-company consolidations are easily accomplished - even when companies use different account structures, fiscal years, or accounting systems. FRx is used in over 60,000 sites worldwide and is available for more than 20 accounting packages.
